

ABSTRACT

There is disclosed a medicine supply apparatus that can effectively prevent the quality of medicines contained in a tablet case from changing due to moisture. The medicine supply apparatus includes a tablet case having an opening, a discharge mechanism for dropping a medicine in the tablet case through the opening so as to be discharged, a drive mechanism for driving the discharge mechanism, and a filling member for receiving the medicine discharged by the discharge mechanism, wherein the opening of the tablet case is closed by a detachable cover member to enable sealing the inside of the tablet case.
